

# Cultural Case: History

```
"prompts": [  
  {  
    "step": 1,  
    "prompt": "This is the first key frame of a continuous four-part visual event sequence showing a quiet American garage in the 1970s, with two young men surrounded by circuit boards, a soldering iron, and handwritten blueprints on a cluttered workbench.",  
    "explanation": "This frame depicts the early days of the personal computing revolution, showing Steve Jobs and Steve Wozniak in their garage workspace before Apple Computer was founded. The scene captures the causal trigger: passionate innovation and experimentation by hobbyists."  
  },  
  {  
    "step": 2,  
    "prompt": "This is the second key frame of a continuous four-part visual event sequence showing the garage workspace now busier, with early Apple I components assembled on a cluttered table as Jobs and Wozniak engage with prototype boards and wiring.",  
    "explanation": "This frame illustrates the early transformation driven by the causal trigger—intense innovation. However, now the workspace is more active, displaying tangible progress such as early Apple I hardware. Jobs and Wozniak are visibly engaged in hands-on electronics work, signaling the shift from experimentation to product development."  
  },  
  {  
    "step": 3,  
    "prompt": "This is the third key frame of a continuous four-part visual event sequence showing the same garage, now bustling with intensified activity, with multiple assembled Apple I computers, packaging materials, and a growing stack of circuit boards as Jobs and Wozniak coordinate production and prepare for distribution.",  
    "explanation": "This frame captures the scaling phase of Apple's origin story. The garage remains identical in layout and lighting to prior frames, reinforcing spatial continuity. The scene now shows Jobs and Wozniak transitioning from prototyping to small-scale manufacturing, a direct result of early technical success and market interest."  
  },  
  {  
    "step": 4,  
    "prompt": "This is the final key frame of a continuous four-part visual event sequence showing the same suburban garage now abandoned, with a commemorative plaque outside and modern visitors taking photos, marking the completed transformation from startup to historical landmark.",  
    "explanation": "This frame reflects the long-term outcome of Apple's founding, where the original garage—unchanged in structure, lighting, and camera angle—is now a memorial site. The visitors and plaque represent recognition of its historic role, directly resulting from the earlier innovations and global impact initiated there."
